

# **A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror**

**United Materials & Systems Inc**

# Discussion Points

- Brief History of the Company
- Brief History the Technology
- Overview of Technology Fit
  - Deliverable for NASA
  - Summary

**A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror**

# Brief History of the Company

3 Inventors

Business Structure

Business Development with  
UCF Venture Lab

## 3 Inventors

**Arnold Hill**

Masters Degree Student

**Dr. Linan An, UCF**

Associate Professor and Director  
Materials Processing Laboratory  
Advanced Materials Processing & Analysis  
Center (AMPAC)  
University of Central Florida

**Dr. Weifeng Fei**

Post Doc

# Business Structure

Dr. Linan An, UCF

Technical  
Advisory Board

Mark Tellam, PE

Board,  
Business Development

Arnold Hill

President

Fengxia Ma

Principal Investigator

Dr. Weifeng Fei

Technical Staff

A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Business Development with UCF

Florida High Tech Corridor Council  
(UCF, USF, UFL)

Provided External Matching Grant

UNIVERSITY OF  
SOUTH FLORIDA

UCF Venture Lab Mentoring  
(UCF Business School)

Brief History of the Company

United Materials and Systems, Inc

# Brief History of the Technology

- Coating Applications
- Nano Technology Extensions
- Bulk Material Applications

# Coating Applications

Clear  
Anti Corrosion  
Gas Barrier  
Easy to Clean  
High Temperature

*Corrosion protection coatings*

*Ref:Clariant*

**ESEM (environmental scanning electron microscopy) Experiment:**  
Curing of polysilazane layer on a metal surface: **dimensional stability**

## A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Coating Applications

*Application of PZane formulations*

Wiping

Roll coating

Spray coating

Dip coating

Spin coating

*Ref:Clariant*

# Nano Technology Extensions

Lithographically  
Defined  
Structures &  
Components

Micro Fluidics

*Ref: UCF AMPAC*

A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Bulk Material Applications

Circuit  
Boards

Disk Brakes

*Ref: Starfire Systems*

Brief History of the Technology

United Materials and Systems, Inc

A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Bulk Material Applications

*Ref: United Materials  
and Systems*

**A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror**

# Deliverable for NASA

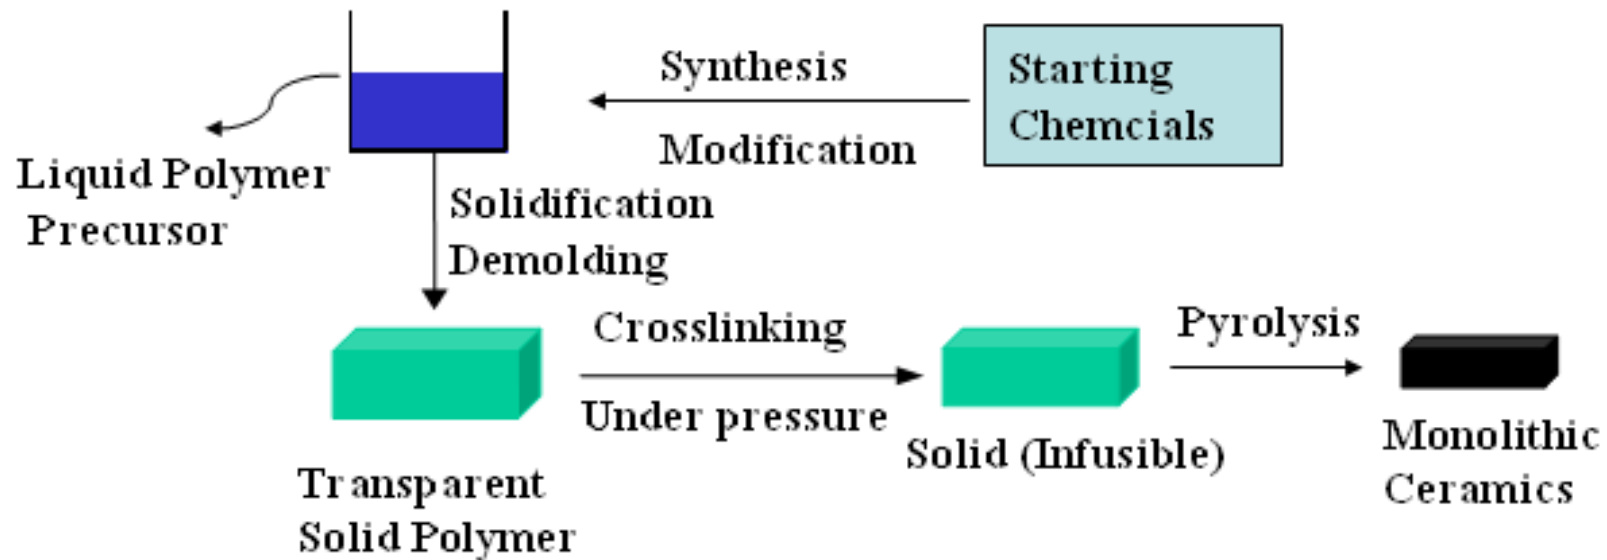

- Process Overview
- Green Body Development
- Ceramic Mirrors

# Process Overview

Polymer Derived Ceramic Precursors = *Fetal Ceramic*

Working with Fluid, Curing with Heat and/or Light

# Green Body Development

Green Body

*(Ceramic Children)*

Machining

*is performed to yield near  
net shape, while plastic*

*No tooling*

*Low energy consumption*

A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Ceramic Mirrors

## Unique Adult Ceramic

Processed to 800-1000 (deg C)  
Less energy consumed than  
with sintering

## Grinding Polishing

Accomplished relatively easily

## Metalizing

Looking at feasibility options

**A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror**

# Overview of Technology Fit

- Fit with NASA Mirror Program
- Summary

# Fit with NASA Mirror Program

*FOCUS : Areal Cost rather than Areal Density*

HST primary mirror has an areal density of  $175 \text{ Kg/m}^2$   
*(glass = heavy)*

JWST primary mirror has an areal density of only  $13.2 \text{ Kg/m}^2$   
*(beryllium = toxic)*

Silicon Carbide high temperature sintering  $>1500 \text{ deg C}$ , extremely hard

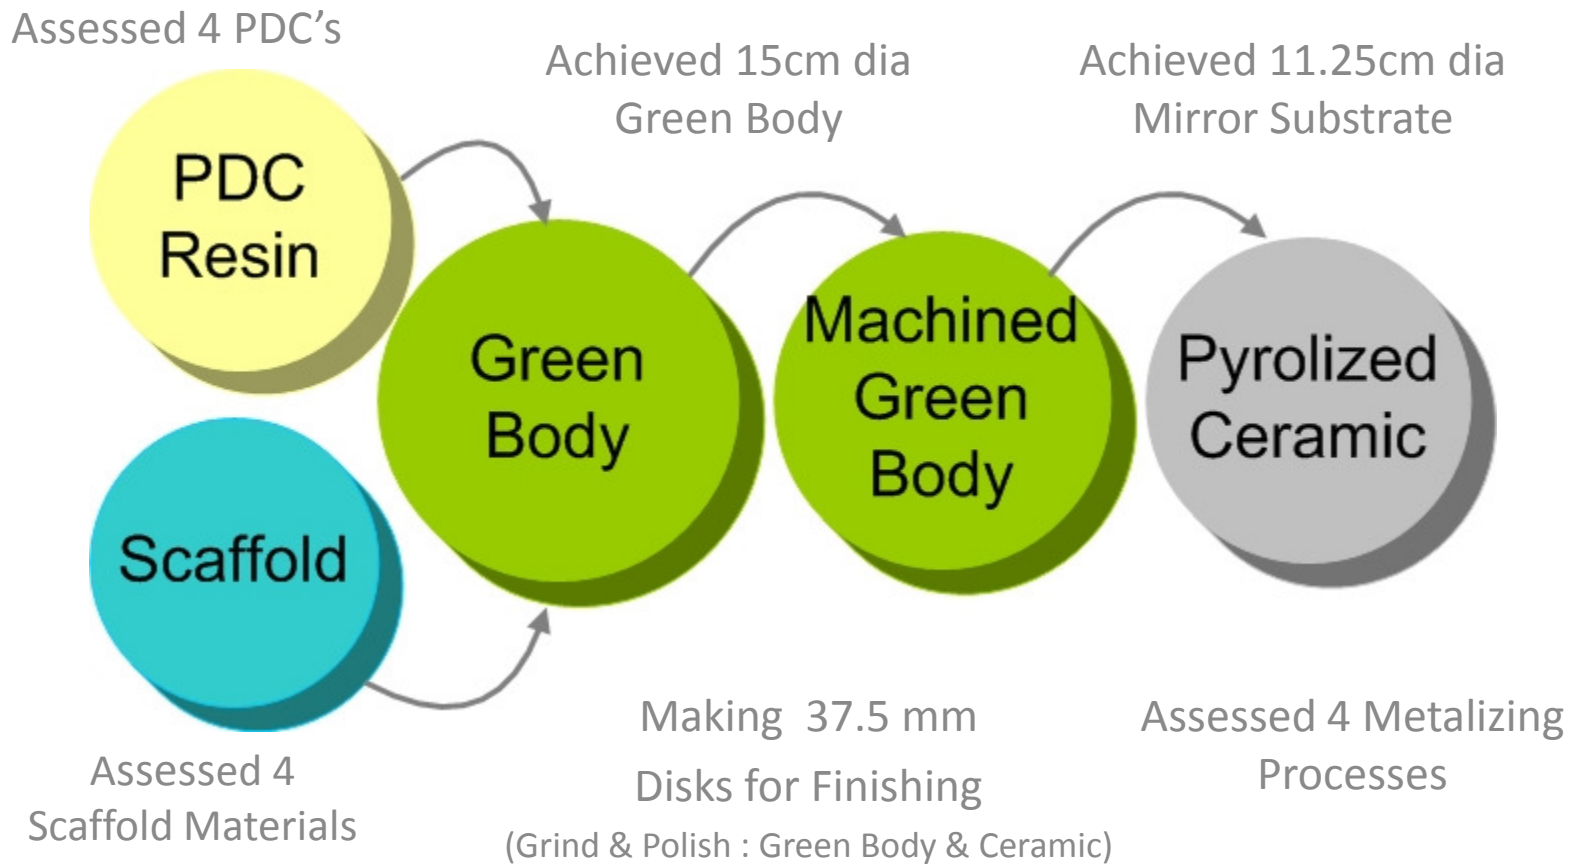

SiCN pyrolyzed at  $1000 \text{ deg C}$ ... softer than SiC, but harder than glass

SiCN has an amorphous structure which takes a polish well

## A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

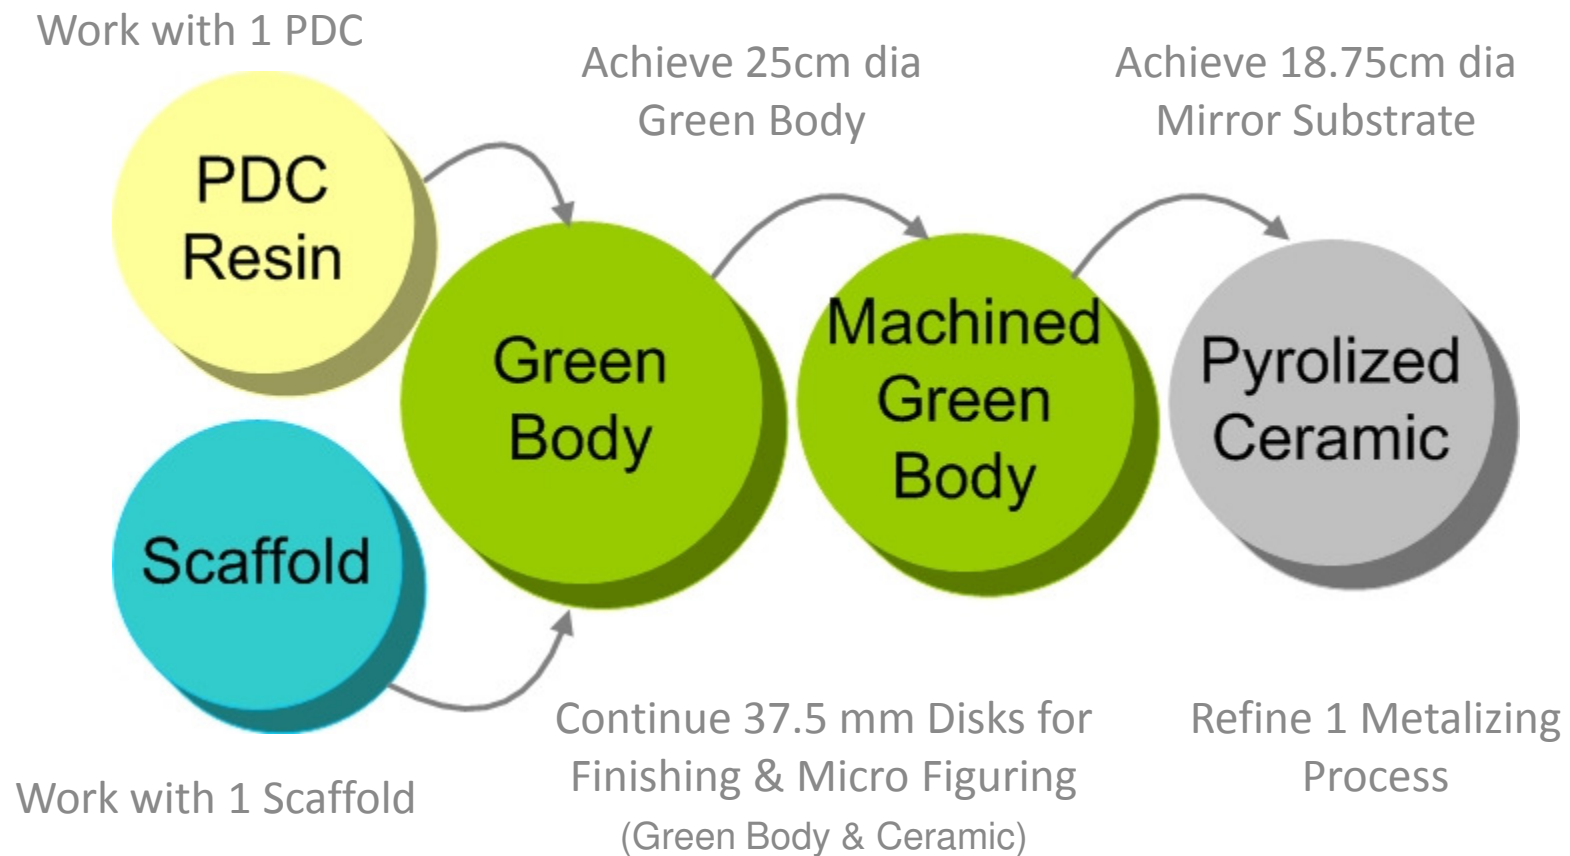

# Summary (Interim 1 & 2)

## A Low Cost, Light Weight, Polymer Derived Ceramic Telescope Mirror

# Summary (Final Interim)

# United Materials & Systems Inc

## Orlando, Florida
